Fireproofing Products for Structural Fire Protection

• Commercial • Industrial • Architectural •

Kasteel offers a variety of cementitious and intumescent fireproofing products from Carboline that are specifically designed to protect a building's structural steel from failure in the event of a fire.

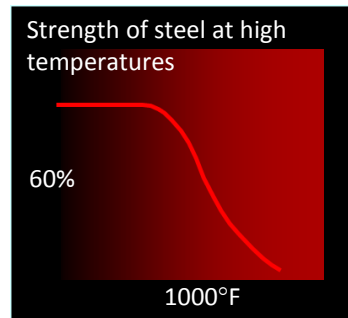

Industrial Strength Fireproofing that Meets the Challenge

Intumescent Fireproofing

- ✓ Allows designers and architects the ability to incorporate exposed steel structures into their designs.
- ✓ Attractive, architectural finish in any color and gloss level.

Cementitious Fireproofing

- ✓ Gypsum based, blended fire resistive thermal barrier coating.
- ✓ Textured finish, non-decorative.

At 1000°F steel reaches 60% of its original strength

Tested ✓ Approved ✓ Trusted ✓ Proven ✓

The Carboline company is a world leader in fire protection and high performance coatings. It's versatile range of products allow Kasteel to provide trusted solutions to meet and exceed any project specification and performance criteria. These products have been tested and approved to meet the strict building codes and insurance industry specifications for today's building structures.
