

Coating Systems

Our Coating Systems are formulated to increase the performance and appearance of your floors. Chemical, abrasion and impact resistant systems assure durability and longevity. Specialized configurations meet the needs of static control environments. Available in a wide range of finishes and textures, pigmented or clear, epoxy and urethane formulations.

STONKOTE GS4

General service epoxy coating, designed for use whenever a high solids, corrosion resistant, gloss coating is required.

STONKOTE HT4

A two-component epoxy coating that is specifically formulated to provide outstanding protection from a wide range of chemicals while increasing abrasion resistance, impermeability and cleanability.

STONKOTE AT5

A four-component static control epoxy coating based on Stonkote HT4 chemistry. It is formulated to increase abrasion and chemical resistance while improving cleanability and controlling static charge generation.

STONSEAL GS7

A general service, high performance, waterborne, polyurethane coating. Stonseal GS7 combines superior chemical and abrasion resistance with excellent adhesion and resistance to ultraviolet light.
